

Version 2

Lake Bottom (Strata), Lake Victoria, Vector Point, ~2017

Reference Information and Units:

Projection: African Lambert Conformal Conic

ESRI: 102024 (<https://epsg.io/102024>)

GCS: GCS_WGS_1984

File Naming Convention:

V2_Strata_Points.shp

Data Origin:

Admiral Bathymetric Charts:

Description: British admiral bathymetry maps of the lake. Maps were scanned and georeferenced. Once georeferenced the points were digitized and the strata was recorded.

Points: Approximately 541

Year: 1900-1955

Acoustic Sounder:

Description: Description: Points were taken to determine the strata of the lake by using a Simrad EK60 echo sounder. The points were read into Arc using X,Y coordinates

Points: Approximately 46

Year: 2009

Data Development

Strata points were obtained using admiral bathymetry charts and points taken out in the field. The points from the admiral bathymetry charts were digitized. The points taken in the field were brought into ArcMap using X, Y coordinates. The strata was recorded for each point in the following fields "Strata1", "Strata2", "Strata3", and "Stra_srce". Field descriptions can be found below.

Fields:

Z- Depth in Meters

Strata1- the strata type. Mud/Sand/Rock/Gravel/Humus

Example: m

Strata2- the texture of the strata type. Soft/Medium/Hard

Examples: sft

Strata3- the color of the strata. Black

Examples: blk

Stra_srce- source where the strata came from. Admiral Bathymetric Charts

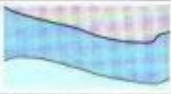

Example: Admiralty
